

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Circumstances of the Observation will the more readily discover whether the Declination is Easterly or Westerly.

N. B. Though it would be very commendable in Gentlemen who use the Sea, to learn the Names of most of the principal Fix'd Stars, yet even that Knowledge is not necessary in the Use of this Instrument : Neither is it needful in this Case to know exactly the Latitude of the Place of Observation, provided the Difference of Latitude between the Observations be not very great : It is sufficient, that Care be taken to observe the self-same Star, before it comes to the Meridian, and after it has pass'd it; and for the sake of greater Exactness, the Caution before given should be regarded, to wit, That the Star be at some considerable Height above the Horizon, and also near the prime Vertical.

XIV. *An Account of a Book presented to the Royal Society, and intituled, Notitia Hungariæ novæ Historico-Geographica, &c. Auctore Matth. Belio. By the Reverend Zachary Pearce, D. D. F. R. S. &c.*

THE Author of this Work is the Reverend *Matthias Bell*, a Pastor among the *Lutherans* at *Presburg* in *Hungary*. About twelve Years ago he publish'd an Account of what he intended to execute; and by the Encouragement of his present Imperial Majesty, and some of the Nobility, he went
on

on with it, notwithstanding many Difficulties, which (as he tells us) he met with in the Undertaking, and publish'd the first Volume last Year.

This first Volume is to be follow'd by several others; for the Kingdom of *Hungary* includes 48 Districts or Counties, and this Volume gives an Account of only one of them, and indeed is chiefly taken up with the History of the City of *Presburg* (or *Pisonium*, as he calls it); which, though inferior in other respects to the City *Buda*, is the Place where the Emperors (as Kings of *Hungary*) are crown'd, where the States of the Kingdom assemble, and the Courts of Justice are held.

This Volume consists of two Parts. The First is general, and gives an Account of the physical and political State of the whole District or County of *Pisonium*, describing its Soil, Produce, Rivers, the Temperature of its Air, the Nature of its Inhabitants; its antient Inhabitants and present ones, its Nobility, Magistrates, and whatsoever belongs to the natural and political History of the District.

The second Part (which is much the largest) is taken up with the Description of the City *Presburg*; where the Author is very copious and elaborate in setting forth every thing that relates to it: Particularly its antient State under the several Nations who possess'd it, and its present State under the *Austrian* Family; all its Privileges and Prerogatives, especially of the Inauguration of their Kings, which he describes in all its Parts, even to a most minute Exactness. He then enters into a Detail of the present State of the City, its Churches, and other public Buildings, its Magistrates, Islands adjoining, and the Country

round about its Walls; leaving to the next Volume the Description of the four other Cities or principal Towns, which are situated in the same District.

The Work is printed after a most beautiful and expensive manner, with all the Ornaments of Engravings that may set it off to the best Advantage. There are two different Prospects of the City *Presburg*, and a Map of the whole District, which seems to be very accurately taken, and is made by *Samuel Mikovinius*, a noble *Hungarian*, and Member of the Royal Society of *Berlin*. Every other District is to have a Map of it plac'd before the Description of it: And the Maps are made in an Astronomico-Geometrical Method, upon a careful Survey of each District; for which laborious Work the States of the Kingdom of *Hungary*, by Order of the Emperor, were pleas'd to give him all manner of Encouragement and Assistance: As they have likewise to Mr. *Matthias Bell*, the Author of the Description, to which the Maps are prefix'd.

Upon the whole, should this Author live long enough (if any Life be long enough) for the finishing of so very extensive a Design, the Libraries of the Learned will receive a great Addition, which may not only gratify their Curiosity, but afford Matter of Improvement in the History of *Hungary*.
